Convergence and Divergence

Definition

A **sequence** is an ordered set of real numbers, equivalently, a **sequence** is an function from the positive integers to the real numbers.

If $\lim_{n\to\infty}a_n$ does not exist or is infinite we say it **diverges**.

Examples of sequences that diverge

$$a_n = (-1)^n$$

$$a_n = 2^n$$

Convergence and Divergence

Definition

A **sequence** is an ordered set of real numbers, equivalently, a **sequence** is an function from the positive integers to the real numbers.

If $\lim_{n\to\infty}a_n$ does not exist or is infinite we say it **diverges**.

Examples of sequences that diverge

$$a_n = (-1)^n$$

$$a_n = 2^n$$

Exercise: If $r \in \mathbb{R}$, when does $a_n = r^n$ converge and diverge? (this is called a geometric sequence)

Alternating Sequences

An **alternating** sequence is of the form $a_n = (-1)^n b_n$ where $b_n \ge 0$ for all n.

Theorem

Given an alternating sequence a_n , if $\lim_{n\to\infty} |a_n| = 0$ then $\lim_{n\to\infty} a_n = 0$.

Alternating Sequences

An **alternating** sequence is of the form $a_n = (-1)^n b_n$ where $b_n \ge 0$ for all n.

Theorem

Given an alternating sequence a_n , if $\lim_{n\to\infty} |a_n| = 0$ then $\lim_{n\to\infty} a_n = 0$.

Exercise: Prove the above theorem using our limit rules and the squeeze theorem.

Definition

- A sequence is **increasing** if $a_n \leq a_{n+1}$ for all *n*.
- A sequence is **decreasing** if $a_n \ge a_{n+1}$ for all *n*.
- If a sequence is decreasing or increasing we say it is monotonic.

글 돈 옷 글 돈

Definition

- A sequence is **increasing** if $a_n \leq a_{n+1}$ for all *n*.
- A sequence is **decreasing** if $a_n \ge a_{n+1}$ for all *n*.
- If a sequence is decreasing or increasing we say it is monotonic.

Definition

A sequence is **bounded above** if there exists a constant M such that $a_n \leq M$ for all n.

A sequence is **bounded below** if there exists a constant *m* such that $a_n > m$ for all *n*.

A sequence is **bounded** if it is both bounded above and bounded below.

Theorem

Every increasing sequence that is bounded above converges. Similarly, every decreasing sequence that is bounded below converges.

Theorem

Every increasing sequence that is bounded above converges. Similarly, every decreasing sequence that is bounded below converges.

Example: Suppose $a_1 = \sqrt{2}$ and $a_n = \sqrt{2 + a_{n-1}}$, show that $\{a_n\}$ converges and find its limit

Sequences

Must Know Theorems Regarding Limits

$$\begin{array}{ll} & \lim_{n \to \infty} \frac{\ln(n)}{n} = 0 \\ & \lim_{n \to \infty} n^{\frac{1}{n}} = 1 \\ & \lim_{n \to \infty} x^{\frac{1}{n}} = 1 \text{ if } x > 0 \\ & \lim_{n \to \infty} x^n = 0 \text{ if } |x| < 1 \\ & \lim_{n \to \infty} (1 + \frac{x}{n})^n = e^x \\ & \lim_{n \to \infty} \frac{x^n}{n!} = 0 \end{array}$$

Series

Series in terms of Sequences

Roughly, an infinite series $\sum_{i=1}^{\infty} a_i$ denotes the sum of the terms in the sequence $\{a_i\}_{i=1}^{\infty}$.

Definition

The **n-th partial sum** for a sequence $\{a_i\}_{i=1}^{\infty}$ is

$$S_n = \sum_{i=1}^n a_i = a_1 + a_2 + a_3 + \dots + a_n$$

Definition

A Series

$$\sum_{i=1}^{\infty} a_i = lim_{n \to \infty} S_n$$

Ryan Blair (CSULB)

Series

Series in terms of Sequences

Roughly, an infinite series $\sum_{i=1}^{\infty} a_i$ denotes the sum of the terms in the sequence $\{a_i\}_{i=1}^{\infty}$.

Definition

The **n-th partial sum** for a sequence $\{a_i\}_{i=1}^{\infty}$ is

$$S_n = \sum_{i=1}^n a_i = a_1 + a_2 + a_3 + \dots + a_n$$

Definition

A Series

$$\sum_{i=1}^{\infty} a_i = lim_{n \to \infty} S_n$$

Exercise: Given a constant *r* find $\sum_{i=0}^{\infty} r^i$ when it exists.

Ryan Blair (CSULB)

First tests for convergence

Theorem

If a series $\sum_{i=1}^{\infty} a_i$ converges then $\lim_{n\to\infty} a_i = 0$.

Theorem

If $\lim_{n\to\infty} a_i \neq 0$ or does not exist, then $\sum_{i=1}^{\infty} a_i$ does not converge.
